

Milestone 3

CSC648-01 Team 4

Due: 11/10/22

Number of Students Present: 6

1. UI and Functionality Feedback
 - a. Need to implement our key feature, the tag page to navigate the website and explore new posts and other tags that might be interesting.
 - b. Create Post and View Post pages need to be updated to be functional. Currently they are just placeholders, and the add post page is currently missing some items that will be needed for the creation of a post.
 - c. Make the homepage button different from the other buttons. It should look more like a logo instead of a button.
 - d. Application looks bland, needs to add style and color to make the webpage look more inviting.
2. List of P1 features committed for delivery
 - a. Front end - Tag System used for navigation and exploration the the application
 - b. Front end - Post System, Create, Update, Delete, View
 - c. Front end - Replies System used to add replies onto a post and a vote system to vote on good replies
 - d. Front end - User accounts display user information and create new accounts
 - e. Back end - API set up to get and make all the the functionalities from the front end
 - f. Expect a fully functional application that allows the user to browse posts, create an account and login and create posts. Additionally the user will be able to add replies and like replies that are helpful
3. Project Status
 - a. Teamwork - The team is working, we are able to spread the work across each of the members and are able to meet most deadlines. I think there could be more collaboration on some parts of the project, however I think a lot of the work we have done so far has really been individual tasks. The scrum meetings are helpful and we are able to keep track of the tasks of each member and the status of the assigned tasks.
 - b. I think the biggest risk is skills. I believe that most of us are unfamiliar with a lot of the technologies that we are using and it takes a bit longer for us to be able to create and do the tasks that we are working on. There was some delay for this milestone that was due to the lack of understanding of technologies.
4. Extension
 - a. I would like to have the option available for an extension to 11/27, however as a team we decided that it would be best to aim for 11/20 and be able to take a break for the entire Fall break. But if we are unable to meet this deadline, we want to be able to finish over the break.
